

Semih Mehmet Teke

Engine Programmer · Tools Developer · Software Engineer

semihm.teke@gmail.com · semihteke.com · github.com/SemihMT · Belgium · Remote

PROFILE

Engine and tools programmer with a Bachelor in Game Development (Digital Arts & Entertainment, Howest). Experienced in building developer-facing systems across the stack, including Unity editor tooling (commercial Asset Store release), a custom Vulkan renderer, a C++ networking library, and a cross-platform C++ engine.

Focused on improving developer workflows through robust tooling, clean architecture, and performant systems. Seeking full-time or freelance roles in engine, tools, or systems programming.

EXPERIENCE

Junior Game Programmer (Internship)

Happy Volcano · Belgium · Feb 2025 – Jun 2025

- Designed and implemented an internal localization editor tool, significantly improving speed and accuracy when selecting localization keys across the project.
- Built core gameplay systems for **Modulus** (Steam), including currencies, progression (XP/ranks), and a tech tree, fully integrated with UI and backend systems.
- Owned UI implementation end-to-end, translating Photoshop mockups into functional in-engine interfaces.
- Collaborated directly with design leadership, iterating rapidly on features from concept to production-ready systems.

Python & Computer Science Teacher

Secondary Education · Belgium · 2025 – Present

- Teach Python and core CS concepts to final-year students, focusing on problem-solving and fundamental programming principles.

EDUCATION

Bachelor of Games: Game Development

Digital Arts & Entertainment (DAE), Howest · Kortrijk, Belgium · 2022 – 2025

- Specialised in engine programming, graphics programming, and tool development.

PROJECTS

DevFlow: Unity Asset Store Package (Axiomium)

2026 – Present

- Developed and released a commercial Unity editor tooling package, independently built, shipped, and maintained.
- Implemented **PlayModePreserver**, enabling reliable runtime state persistence across Play/Edit mode transitions.
- Solved GameObject identity tracking across domain reloads using a custom reference system, eliminating common iteration friction for developers.
- Managed full product lifecycle: development, packaging, documentation, and distribution.

Cadmium: C++ Game Engine

2026 – Present

- Building a cross-platform C++ engine targeting native desktop and web (Emscripten).
- Designed Lua-based scripting layer and explored LSP integration for editor tooling (autocomplete, diagnostics).
- Focus on modular architecture and developer-facing usability.

Nexus: C++ Networking Library

2024 – 2025

- Designed a high-level networking abstraction on ASIO to simplify multiplayer game development.
- Reduced code volume by up to 64.5% and cyclomatic complexity by up to 71.9% compared to ENet.
- Implemented cross-platform support (Windows/Linux/macOS) with CMake and CI/CD via GitHub Actions.

VulkanGin: Voxel Editor & Renderer

2024

- Built a voxel world editor with infinite procedural generation and dynamic chunk loading.

- Implemented a custom Vulkan renderer from scratch: swap chain, descriptor sets, and shaders.

Voice of the Ocean

2024 – 2025

- Developed gameplay systems for a voice-controlled action-adventure game.
- Implemented NPC AI (Behavior Trees and a custom EQS system) and melody-based interaction systems.
- Nominated for Best Student Game (Belgian Game Awards) and finalist at GDWC.

SKILLS

Languages	C++ · C# · C · Python · Lua
Graphics & Low-Level	Vulkan · DirectX 11 · OpenGL · HLSL · GLSL
Engines & Tools	Unity (Editor Tooling) · Unreal Engine 5
Build & Systems	CMake · Git · GitHub Actions (CI/CD) · Emscripten · SDL2 · ASIO · ImGui
Concepts	Engine Architecture · Tool Development · Graphics Programming · Networking · Game AI · Developer Experience (DevEx)
Human Languages	Dutch (native) · English (fluent) · Turkish (native)
