

Semih Mehmet Teke

Engine Programmer | Tools Developer | Software Engineer

semihm.teke@gmail.com | semihteke.com | github.com/SemihMT | Belgium | Open to Remote

Profile

Engine and tools programmer with a Bachelor's degree in Game Development from Howest, specialised in engine, graphics, and developer tooling. Builds systems from the ground up, from a cross-platform C++ game engine and custom Vulkan renderer to commercial Unity editor tools and a C++ networking library. Strong focus on clean architecture, performance, and improving developer workflows. Seeking full-time or freelance roles in engine, tools, graphics, or systems programming.

Experience

Game Programmer Intern

Feb 2025 – Jun 2025

Happy Volcano | Belgium

- Designed and implemented an internal localization editor that made localization-key selection faster and more reliable.
- Developed core gameplay systems for *Modulus* (Steam), including currencies, XP/ranks, and a technology tree integrated with UI and backend systems.
- Owned UI implementation from Photoshop mockups to production-ready in-engine interfaces.
- Worked directly with design leadership to turn feature concepts into polished, shippable systems through rapid iteration.

Python & Computer Science Teacher

2025 – Present

Secondary Education | Belgium

- Teach Python and computer science fundamentals to final-year secondary students, with an emphasis on problem-solving and programming principles.

Education

Bachelor of Games: Game Development (Cum Laude)

2022 – 2025

Digital Arts & Entertainment (DAE), Howest | Kortrijk, Belgium

- Specialised in engine programming, graphics programming, and developer tools.

Projects

Cadmium | Cross-Platform C++ Game Engine

2026 – Present | [GitHub](#)

- Architected a cross-platform C++23 engine targeting native desktop and web through Emscripten, with a shared renderer abstraction over native and WebGPU/Dawn backends.
- Built an ImGui editor with a live viewport render target shared across rendering backends, avoiding per-frame backend branching in the engine loop.
- Designed an ECS with a unified component-ID system supporting both native C++ and Lua-defined components.
- Built a layered Lua scripting system with sol2, including type registration, component proxies, hot reload, and granular error reporting.

DevFlow | Unity Editor Productivity Toolkit

2026 – Present | [Unity Asset Store](#)

- Independently developed, shipped, and maintain a commercial Unity editor toolkit, including PlayModeDiff for tracking Inspector changes made during Play Mode.
- Solved GameObject identity tracking across domain reloads with a custom reference system, reducing iteration friction during editor workflows.
- Own the complete product lifecycle, including development, packaging, documentation, and distribution.

Nexus | C++ Networking Library

2026 – Present | [GitHub](#)

- Designed a high-level multiplayer networking abstraction over ASIO to simplify connection, messaging, and networking code for game developers.
- Reduced code volume by up to 64.5% and cyclomatic complexity by up to 71.9% compared with an ENet-based implementation.
- Built cross-platform support for Windows, Linux, and macOS with CMake and GitHub Actions CI/CD.

VulkanGin | Voxel Editor & Renderer

2024 – 2025 | [GitHub](#)

- Built a voxel editor with infinite procedural generation and dynamic chunk loading.
- Implemented a Vulkan renderer from scratch, including swap-chain management, descriptor sets, and shader integration.

Voice of the Ocean | Voice-Controlled Action-Adventure

2024 – 2025 | [Steam](#)

- Developed gameplay systems, NPC AI using Behavior Trees and a custom EQS system, and melody-based interaction systems.
- Nominated for Best Student Game at the Belgian Game Awards and selected as a GDWC finalist.

Skills

Languages

C++ | C# | C | Python | Lua

Graphics

Vulkan | WebGPU | DirectX 11 | OpenGL | HLSL | GLSL

Engines & Tools

Unity | Unreal Engine 5 | ImGui | SDL3

Systems

CMake | Emscripten | ASIO | Git | GitHub Actions

Areas

Engine Architecture | Graphics Programming | Tool Development | Networking | Game AI | Developer Experience

Spoken Languages

Dutch (native) | English (fluent) | Turkish (native)
